

# SECURE IT

FUTURE-READY CYBERSECURITY

## Future-ready Cybersecurity Services

More is the focus of today's digital economy: more people, devices, and complexity. With so much to keep track of, businesses want comprehensive protection that is both easy to manage and intelligent enough to fend off growing threats. As you navigate and manage this complex environment, our IT security services provide you with piece of mind. We'll work with you to create, execute, and optimize a tailored, comprehensive, compliance, and future-ready cybersecurity plan.

Understanding where and how your IT system is sensitive to hazards is the first step in securing your people, devices, and data. Next, we uncover your most critical remediation needs through compliance audits, penetration testing, and focused assessments. Once we've thoroughly understood your current status, we also work with you to establish a roadmap that tackles your existing gaps, compliance and regulatory requirements, and business goals.

## Cybersecurity services for your cloud adoption journey

The cloud has altered the way you do business – and how you secure your IT infrastructure. We'll work with you to develop a tailored plan that develops with your organization as you modernize your IT and move away from traditional security platforms.

## 2021 STATISTICS

### Background

Small and Medium-sized businesses make up 44% of the U.S. economy. Cyber security should be a part of the strategy, whether a company plans to use cloud computing or email and maintain a website. The theft of digital information has surpassed physical theft as the most commonly reported fraud. Every company that uses the Internet is accountable for developing a security culture to boost consumer and business confidence.

### Challenge

IT security measures can be costly, and many SMBs believe they won't fall victim to attacks. Those businesses that take precautions often think that one product is enough or that their business is safe because they are in the cloud. Unfortunately, this is not the case. Attacks are becoming more advanced, cloud ransomware is real, and a single system alone cannot prevent all threats. Also, ransomware costs are high, and your business could be liable to pay penalties for breaches. Cloud service providers retain data for up-to 30 days, and retrieving stolen data is challenging.

### Solution

True IT's cyber security experts use the best tools and products on the market, developing a multilayered approach to protecting your business from cyber threats. Our product is called Secure IT, an information security program designed to protect your business against threats from every angle. In addition, our experts are proactive, stopping threats before they happen. We analyze web content, scan emails, and protect your data using advanced filtering, machine learning, and artificial intelligence.

### Outcome

Take the guesswork out of cyber security with Secure IT powered by True IT. Increase your network protection. Prevent phishing attacks. Interrupt information theft and protect your business by monitoring the dark web for data breaches. Save time, money and your data with a single solution — Secure IT powered by True IT.
